Consequently, the performance of our system is limited by the number of available sensors. Furthermore, the proposed system is able to detect only one type of fault at a time. However, the system can be extended to detect multiple faults simultaneously.

Project BubbleBath.org (PBB) is a community-driven initiative to develop a low-cost, open-source, and accessible water recycling system for schools, hospitals, and organizations which can be deployed in developing countries. The main objective of PBB is to provide a sustainable water recycling system for schools, hospitals, and organizations by reducing their water consumption.

Consequently, the present study was designed to examine the relationship between the amount of time spent in the classroom and the achievement of students in secondary school.

The image shows a close-up of a person's hands and face. The person is wearing a blue surgical mask and blue gloves. They are holding a blue, curved medical device, which appears to be a stethoscope or a catheter. The background is blurred, showing what looks like a hospital or medical facility with various equipment and supplies.
